SAFETY JUSTIFICATION REPORT (extract)

4. Hazard identification and risk assessment

The hazard analysis has been carried out for all stages of the machine life cycle: transportation, installation, commissioning, operation, maintenance and decommissioning, in accordance with TR CU 010/2011 "On safety of machinery and equipment" and GOST 33272 (safety justification of machinery).

Hazard: rotating coupling (pos. 12)

Risk before measures: high. Measure: fixed guard per GOST ISO 13857; interlocked with drive start. Residual risk: low.

Hazard: hydraulic pressure 25 MPa

Measure: relief valve set at 27 MPa; pressure test 1.25·PN at commissioning. Residual risk: low.

Hazard: noise 84 dB(A)

Measure: warning sign, mandatory hearing protection within 2 m zone. Residual risk: acceptable.

Hazard: hot surface up to 95 °C

Measure: thermal insulation and warning marking per GOST R 12.4.026. Residual risk: low.

Safe operation limits: ambient temperature +1...+40 °C; the machine shall not be operated with guards removed or safety devices bypassed. The list of critical failures and personnel actions is given in section 6 of the full document.

Translator's note: the section structure follows GOST 33272; references to TR CU technical regulations are kept in their official English form (TR CU 010/2011).
